

Contents

1	Review of Basic Principles	1
1.1	Overview	1
1.2	Foundations	2
1.2.1	Newton's Laws	2
1.2.2	Reference Frames	3
1.2.3	The Principle of Relativity	4
1.2.4	Galilean Transformations	5
1.3	Other Concepts of Single-Particle Dynamics	7
1.3.1	angular momentum	7
1.3.2	kinetic energy, conservative forces and potentials	8
1.4	Systems of Particles	9
1.4.1	Center of Mass	11
1.4.2	Momentum	13
1.4.3	Angular Momentum	13
1.4.4	Energy	14
1.5	Conservation Principles	15
1.6	The Two Body Problem	16
1.7	Conservative Versus Dissipative Dynamics	18
1.7.1	some empirical formulas	19
1.7.2	the problem of dissipation	20
1.8	Gravitation	20
1.8.1	historical musings	21
1.8.2	gravitational field and potential	22
1.8.3	Poisson's equation	23
1.8.4	Tides	25
1.9	Beyond Newton's Mechanics	26
1.10	Notes	26

2	Lagrangian Dynamics	27
2.1	Overview	27
2.2	Configuration Space and Velocity Phase Space	27
2.2.1	generalized coordinates	27
2.2.2	velocity phase space and some kinematics	30
2.3	Rewriting Newton's Laws of Motion	31
2.3.1	one degree of freedom	32
2.3.2	many degrees of freedom	33
2.3.3	generalized forces	34
2.4	Examples	35
2.5	Calculus of Variations	41
2.6	More Calculus of Variations	45
2.7	Hamilton's Principle	46
2.8	Constraints and Lagrange Multipliers	47
2.8.1	classifying constraints	47
2.8.2	Lagrange multipliers	49
2.9	Symmetries and Conservation Laws	51
2.9.1	cyclic coordinates and first integrals	54
2.9.2	Noether's theorem	54
2.9.3	enter the Hamiltonian	57
2.10	Notes	58
3	Linear Oscillators – One Degree of Freedom	51
3.1	Overview	51
3.2	Static Equilibria: Stable and Unstable	52
3.3	Linearized Dynamics Near Static Equilibrium	53
3.4	The Damped Simple Harmonic Oscillator	56
3.4.1	underdamped: $Q > 1/2$	57
3.4.2	overdamped: $Q < 1/2$	58
3.4.3	critically damped: $Q = 1/2$	58
3.4.4	The Meaning of Q	59
3.5	Phase Portraits	60
3.6	The Periodically Driven SHO	62
3.6.1	Resonance	63
3.6.2	general periodic driving: Fourier series	67
3.6.3	Extended Phase Space	69
3.7	Arbitrary Driving Force: Green Functions	70
3.7.1	Detour: The Dirac Delta "Function" and other Distributions	72
3.7.2	Back to Green Functions	75
3.7.3	Green function for the Laplacian	77

3.8	LRC Circuits	79
3.9	Notes	80
4	From 1-d Motion to the Kepler Problem	81
4.1	Overview	81
4.2	Motion in One Dimension	82
4.2.1	the general idea	82
4.2.2	phase space view: plane pendulum again	84
4.2.3	the period of the pendulum	86
4.3	Two Particles Moving in a Central Force Field	88
4.3.1	Reduction	89
4.4	The Kepler Problem	95
4.4.1	Kepler's Laws: historical prelude	95
4.4.2	finding the orbits: the $u = 1/r$ trick	96
4.5	Notes	99
5	Small Vibrations	98
5.1	Overview	98
5.2	An Example: two coupled pendula	99
5.3	Linear Algebra, the short course	101
5.3.1	vector spaces	101
5.3.2	bases	102
5.3.3	linear operators	102
5.3.4	columns, rows and matrices	103
5.3.5	eigenvectors and eigenvalues	106
5.3.6	determinants	107
5.4	Linearized Dynamics in the Vicinity of a Fixed Point	108
5.5	Normal Modes: back to coupled pendula	111
5.5.1	the role of symmetry	112
5.6	A pair of coupled harmonic oscillators: trends	113
5.7	Lissajous figures and quasi-periodic motion	116
5.8	more things we can do	118
5.8.1	first order vector ODE's and exponentiation	118
5.8.2	Green functions revisited	122
